

[Loginov, A. A.](#)

A program for the computation of the matrix exponential function using the diagonal Padé approximation. (Russian) [Zbl 0554.41001](#)

Degenerate systems of ordinary differential equations, Collect. Artic., Novosibirsk 1982, 91-97 (1982).

[For the entire collection see [Zbl 0511.00015](#).]

An ALGOL program for the computation of the matrix exponential function $\exp(A) = \sum_{k=0}^{\infty} A^k/k!$ is given, where A is a constant finite-dimensional matrix with real elements. The problem is reduced to the computation of the diagonal Padé approximants by using *R. Ward's* idea [*SIAM J. Numer. Anal.* 14, 600-610 (1977; [Zbl 0363.65031](#))]. A modification of this idea is presented.
