**Complete convergence for negatively dependent sequences of random variables.** (English)

Zbl 1202.60050

J. Inequal. Appl. 2010, Article ID 507293, 10 p. (2010).

Summary: We study the complete convergence for negatively dependent sequences of random variables. As a result, we extend some complete convergence theorems for independent random variables to the case of negatively dependent random variables without necessarily imposing any extra conditions.

This reference list is based on information provided by the publisher or from digital mathematics libraries. Its items are heuristically matched to zbMATH identifiers and may contain data conversion errors. It attempts to reflect the references listed in the original paper as accurately as possible without claiming the completeness or perfect precision of the matching.
