On the strong laws for weighted sums of ρ^* -mixing random variables. (English) Zbl 1216.60026
J. Inequal. Appl. 2011, Article ID 157816, 8 p. (2011).

Summary: Complete convergence is studied for linear statistics that are weighted sums of identically distributed ρ^* -mixing random variables under a suitable moment condition. The results obtained generalize and complement some earlier results. A Marcinkiewicz-Zygmund-type strong law is also obtained.
