Richman games.  (English) [Zbl 0873.90139]

Summary: A Richman game is a combinatorial game in which, rather than alternating moves, the two players bid for the privilege of making the next move. We find optimal strategies for both the cases where a player knows how much money his or her opponent has and the case where the player does not.

For the entire collection see [Zbl 0857.00041].
