Davies, Jim; Schneider, Steve
A brief history of Timed CSP. (English) Zbl 0874.68162

Summary: This paper is a comprehensive introduction to the language of Timed CSP, proposed by Reed and Roscoe (1986). A brief description of the notation is followed by a detailed survey of timed and untimed models for the language. A compositional proof system is included, together with an account of timed refinement. The paper ends with a list of the changes made to the theory in recent years, and a brief discussion of other timed process algebras.

MSC:
68Q45 Formal languages and automata

Keywords: timed CSP
