

Conway, Richard W.; Maxwell, William L.; Miller, Louis W.

Theory of scheduling. (English) [Zbl 1058.90500](#)

Reading, Mass.: Addison-Wesley Publishing Company. x, 294 p. (1967).

Table of Contents: Ch. 1: Problems of sequence (pp. 1–8); Ch. 2: Measures for schedule evaluation (pp. 9–21); Ch. 3: Finite sequencing for a single machine (pp. 22–52); Ch. 4: Further problems with one operation per job (pp. 53–79); Ch. 5: Flow shop scheduling (pp. 80–102); Ch. 6: The general n/m job-shop problem (pp. 103–131); Ch. 7: General network problems related to scheduling (pp. 132–140); Ch. 8: Selection disciplines in a single-server queueing system (pp. 141–190); Ch. 9: Single-server queueing systems with setup classes (pp. 191–207); Ch. 10: Multiple-server queueing models (pp. 208–218); Ch. 11: Experimental investigation of the continuous job-shop process (pp. 219–248); Bibliography (pp. 249–258); Appendix A: The Laplace-Stieltjes transform of a distribution function (pp. 259–260); Appendix B: Experimental results: n/m job-shop problem (pp. 261–281); Appendix C: Experimental results: continuous-process job-shop problem (pp. 282–290).
