The paper is concerned with the approximation of nonsmooth solutions to linear ill-posed equations  $Au = f$  with noisy data. Let  $A$  be a linear bounded operator from  $L_p(D)$  into  $L_q(S)$ , where  $1 < p, q < \infty$  and  $D \subset \mathbb{R}^m$ ,  $S \subset \mathbb{R}^k$  are domains with piecewise-smooth boundaries. Suppose the original equation has a solution  $\hat{u}$  in the space  $U = \{u \in L_p(D) : J(u) < \infty\}$ ,  $J(u) = \sup\{\int_D u(x) \operatorname{div} v(x) dx : v \in C_0^1(D, \mathbb{R}^m), |v(x)| \leq 1\}$ , and instead of true elements  $(A, f)$  their approximations  $(A_h, f_\delta)$  are available. Let  $u^0$  be an approximation to  $\hat{u}$ . The authors present convergence results for the Tikhonov regularization method  $\min\{\|A_h u - f_\delta\|_{L_q}^q + \alpha(\|u - u^0\|_{L_p}^p + J(u)) : u \in U\}$  and discuss approaches to its numerical implementation.
