Minimax programming under new invexity assumptions. (English) [Zbl 1150.90446](#)
Rev. Roum. Math. Pures Appl. 52, No. 3, 367-376 (2007).

Summary: We consider the minimax programming problem and focus on optimality conditions and duality properties. Some of previously known theoretical results are restated in terms of (Φ, ρ) -invexity and related properties.
