Schiffer, T.; Aurenhammer, F.; Demuth, M.
Computing convex quadrangulations. (English) Zbl 1236.68282

Summary: We use projected Delaunay tetrahedra and a maximum independent set approach to compute large subsets of convex quadrangulations on a given set of points in the plane. The new method improves over the popular pairing method based on triangulating the point set.

MSC:
68U05 Computer graphics; computational geometry (digital and algorithmic aspects)
52B55 Computational aspects related to convexity

Keywords:
irregular quadrilateral mesh; convex quadrangles; shape quality; Delaunay tetrahedra; maximum independent set

Software:
Qhull; Q-Morph
