Oudadess, Mohamed

**Subnormable $A$-convex algebras.** (English) [Zbl 1425.46031]

Summary: We consider particular $A$-convex algebras, named separately $A$-convex ones. They are not uniformly $A$-convex. However, they are subnormable. We give an example of a uniformly convex algebra which is not $A$-convex. We also consider a comparison with a class of algebras introduced by A. K. Chilana and S. Sharma [Math. Nachr. 77, 139–161 (1977; Zbl 0366.46040)].

For the entire collection see [Zbl 1407.46002].
